Sonia's lecture - The engineering of reality

2013 90 minutes DVD

### **Description**

Custom Designing the Human Race

Sonia's lecture at Conspiracy Con June 2013.

The engineering of reality, our thoughts and our beliefs are a science beyond mere mind control. The interception of our perceptions, beliefs, wants, desires, feeling, thoughts and fears are subtly orchestrated. This kind of management system has its roots both on and off world and is carried out in a corporatized format. Those at the bottom report to those at the top. The question of "who" is perhaps not as significant as why. We exist in a tried, proven and perfected system as the mechanical and biological design of humans has been studied extensively. Human emotions and feelings are the vehicle for customizing the human race. It is a matter of pushing the right buttons to receive the desired response. Even those who profess great knowledge are not immune to this kind of interception and alteration, for one's sovereign and spiritual quest is redirected most often into becoming religious and social programming. Being ignorant of our design and of the system or matrix within which we operate is our greatest weakness, and for that we are left vulnerable.

Sonia will discuss the role of prominent organizations and causes, such as the environmental movement, used as vehicles for mass agendas. We will examine the manner in which we are distracted from recognizing the manipulation of networking systems, such as those linked between the environment and our solar system/universe. The current media diversions are designed to make simple the re-engineering and the reprogramming of the human species. Such alterations serve to support a custom-made species configured for a custom-made evolution. Does this sound crazy? The educational system has long served as a tool, which shapes our minds, setting boundaries by presenting us with a packaged version of reality. There is a great science at work, and this is, perhaps, the most significant realization to which we should awaken.
